

Dedicated Internet Access (DIA)

Get guaranteed upload and download speeds with your own leased line connection

Dedicated Internet Access (DIA) is a high-speed internet service designed for businesses of all sizes. With DIA you'll have a dedicated and unlimited internet connection that isn't shared with anyone else, so you get the maximum performance you pay for.

As a 100% fibre connection, you also benefit from the latest and most advanced technology for internet access. Instead of traditional copper-based or hybrid connections, you can expect very low latency and a whole range of speeds depending on your needs.

Key benefits

- A dedicated internet connection that's not shared with any other customers, for maximum reliability and performance
- Extremely high-speed internet access with speeds up to 10Gbps as standard or even up to 100Gbps as non standard, offering the bandwidth to support every kind of online service or app
- Symmetrical upload and download speeds so there is no difference in the time it takes to upload or download business-critical data
- Resilient options and SLAs up to 99.995% availability to ensure a constant and reliable service
- Full ISO 27001 certification
- 24/7 customer support from Virgin Media's dedicated customer support team

Fast and reliable

With a dedicated and unlimited internet connection, DIA can offer speeds of up to 10Gbps as standard as well as 99.995% service availability

Secure

DIA is a private connection not shared by others, which reduces the risk of data breaches. And it can be paired with Palo Alto Networks' Next Generation Firewall or VMB's Distributed Denial of Service Mitigation (Anti-DDoS) for added protection

Flexible to your needs

Whether as a managed or unmanaged service, DIA is scalable. So it offers the perfect fit as your business expands and you need to cater for extra internet usage

Who is DIA for?

Ecommerce and online marketplaces

High-speed and reliable internet access for processing transactions, transferring large amounts of data and supporting customer interactions.

Hybrid working

Lightning quick uploads and downloads as well as a reliable service ensure employees can communicate and collaborate in real time.

Video conferencing and streaming

Fast, low-latency connectivity support businesses that rely on video conferencing and streaming as a key part of their services.

High-performance computing (HPC)

Stable and rapid connections ensure the viability of HPC applications such as data analysis and machine learning.

Cloud-based services

Bandwidth and availability to support offerings like software-as-a-service (SaaS), infrastructure-as-a-service (IaaS) and platform-as-a-service (PaaS).

Backup and disaster recovery

Fast, secure internet access makes it easier to ensure data is backed up and accessible quickly in an emergency.

Extra security options

DIA can be paired with Palo Alto Networks' Next Generation Firewall or our Distributed Denial of Service Mitigation (Anti-DDoS) and other managed security services to enhance security measures. With DIA security add-ons you can also:

Deploy new and effective security measures without the need for in-house expertise

Boost productivity and customer engagement by prioritising the apps that matter

Block any apps to increase the security or efficiency of your business

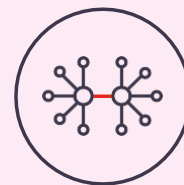

Why work with us?

We have more than 20 years' experience, which means you'll have access to an expert team as well as some of the highest levels of internet availability and security in the country

We know how to keep you secure through the wide range of services we offer under our popular Managed Security portfolio

We're experts in connectivity, with more than 8,000 business connections and services extending across 6,000 organisations in the UK
