

MANAGED FIREWALL

GOOD GUYS IN BAD GUYS OUT

Size really doesn't seem to matter much when you're a cyber villain. Every organisation is a viable target. In 2012 a third of targeted cyber-attacks were levelled at organisations with fewer than 250 employees¹ and one report suggests that roughly 60 percent of small businesses suffering a breach fail within six months². Criminals have a knack of making security a real leveller.

To respond to the continual bombardment of increasingly sophisticated threats, running in-house security service is, for some, definitely an option. But for many the cost of internal only cyber-security – specialised people, training, security infrastructure and keeping everything one step ahead of a hundred malicious moving targets – is less realistic.

Our Managed Firewall service gives you next generation appliances from Palo Alto Networks. It's serious, award-winning kit, featuring intelligent protection and detection technology. It'll protect your network against threats, both known and unknown, without hampering your people.

Here's what to expect...

- Powerful security appliances from Palo Alto Networks
 - Prevents known exploits, malware, spyware, malicious URLs
 - Continuously analyses traffic for suspicious behaviours
 - Custom-configured and managed 24x7 by security experts
 - Clear visibility of security incidents, application usage and user behaviour
 - Strict SLAs backing a robust and responsive service
-

Based on robust security policies, we'll set up and test the firewall for you or advise on best practice. And our team of security specialists will proactively monitor and manage your network security, 24x7x365. We're ISO27001 accredited, which means our network, people, policies and procedures meet the highest standards. We're also 2-2-4 certified, which is Government recognition for the high level of security we provide.

The summary below outlines some of the key features of Managed Firewall. And if you have specific questions, we'd be happy to take your call.

Who's it good for ?

Any security conscious business that's reliant on the Internet.

Feature summary

Hardware	<ul style="list-style-type: none">• Award-winning Palo Alto Networks next generation application-aware firewalls.• Wide range of scalable devices supporting small branch sites up to large enterprise organisations.
Platform	<ul style="list-style-type: none">• High performance, purpose-built.
Availability	<ul style="list-style-type: none">• Stateful active/passive or active/active configuration are supported.
Threat prevention	<ul style="list-style-type: none">• Integrated protection from network and application vulnerability exploits, viruses, spyware and unknown threats.
URL filtering	<ul style="list-style-type: none">• On-box to securely enable web usage with policy-based application visibility and control.
VPN	<ul style="list-style-type: none">• Standards based IPSec or SSL VPN for secure site-to-site and remote user connectivity.
