

Voom Fibre | Option 3

Proving bigger is sometimes better

BUSINESS

ARE YOU READY TO #VOOM?

Unleash your awesome with our new Voom Fibre for business

Stop thinking about your internet connection. And focus on using it. New Voom Fibre comes with just one ultrafast download speed, the fastest you can get on our network – right up to 350Mbps.

We believe every business has the right to unleash its full digital potential – to video conference while selling online, to promote on social while offering ultrafast WiFi, and to use cloud apps while backing-up data.

It's a fresh Virgin way to free your business from the shackles of compromise.

How does it work?

Voom Fibre may come with just one download speed – but everything else can be tailored to you.

Option 3 is the have-it-all choice. You get the best of everything. The upload speed hike – to 20Mbps - means you can go full-cloud with every app and scrap of data. And you'll be able to run a range of in-house web services with five static IPs.

Why up to 350Mbps downloads?

Voom Fibre unleashes so many features it's like upgrading every app and device in your business. Combine cloud services, video conferencing, streaming sites and thousands of other apps to give employees and customers the very best experience of your business. Whether you're in a shop, office or factory floor. Or even out and about.

Why up to 20Mbps uploads?

Perhaps you have quite a few people in the office? Because with all the digital activity coming down the pipe, they'll need to send a lot more data up it as well. A 20Mbps upload speed lets you host websites effectively, while sharing enormous files, getting stuck into a few video conferences and uploading images to social media sites. You can also rely on cloud security software to protect all your data.

Multiple Static IPs

Option 3 lets you add multiple static IP addresses (either 5 as standard, or 13 as a bolt-on). This means you can:

- Use on-site firewalls for extra protection.
- Host your own email and web servers on-site for complete control.

What you get

Download speed

Up to 350Mb

Upload speed

Up to 20Mb

Usage limit

Unlimited

Fault response time

24 working hours
